In re application of:

Carol J. Lovatt

Application No.: Not Yet Assigned

Filed:

For: NOVEL FORMULATION OF  
PHOSPHORUS FERTILIZER FOR  
PLANTS

Examiner: Langel, W.

Art Unit: 1754

DECLARATION OF JOHN PETERSON  
UNDER 37 C.F.R. §1.132

Assistant Commissioner for Patents  
Washington, D.C. 20231

I, John L. Peterson, being duly warned that willful false statements and the like are punishable by fine or imprisonment or both (18 U.S.C. § 1001), and may jeopardize the validity of the patent application or any patent issuing thereon, state and declare as follows:

1. All statements herein made of my own knowledge are true, and statements made on information or belief are believed to be true and correct.

2. I received a bachelor of science in chemistry from California State University at Fresno in 1973. I am currently the vice president of manufacturing at Biagro

Western Sales and have been at this position and positions as a chemist for 24 years. See attached Exhibit A.

3. I have read the patent application entitled "Novel Formulation of Phosphorus Fertilizer for Plants" and am familiar with the material contained therein. This declaration is provided to demonstrate that one of skill in the art can determine the metes and bounds of the invention as claimed and practice the invention according to the specification without undue experimentation. In particular, this declaration is provided to demonstrate that the specification describes the fertilizers of the present invention in terms of available phosphorus in an amount equivalent to a  $P_2O_5$  concentration in weight / volume, and that the mathematical conversion of a weight / volume concentration of  $P_2O_5$  into a weight / volume concentration of a phosphorous-containing acid (such as  $H_3PO_3$ ), a salt of a phosphorous-containing acid, or a phosphite, is a routine calculation that is well understood and frequently used in the art.

4. Conventionally, fertilizers are labeled to indicate available nutrients by three successive numbers that represent nitrogen, phosphorus, and potassium, in this order, in the amounts equivalent to the weight percentages of N,  $P_2O_5$ , and  $K_2O$ . For example, a 10-20-15 fertilizer contains nutrients equivalent to 10% of N, 20% of  $P_2O_5$ , and 15% of  $K_2O$  in weight / weight. Although the nutrients do not actually exist in a fertilizer in the forms of N,  $P_2O_5$ , or  $K_2O$ , these species are used as reference measures due to historic reasons.

5. In the present application, examples of fertilizer formulations are provided (Examples 1-9). They are labeled in three successive numbers, such as 0-40-0 or 0-30-0. While these numbers do represent the three nutrients in equivalent concentrations of N,  $P_2O_5$ , and  $K_2O$ , respectively, the concentrations are reflected in weight / volume percentages instead of weight / weight percentages.

6. For instance, in Example 2, 3.86 lbs of  $\text{H}_3\text{PO}_3$  and 0.5 lb of citric acid are made into one gallon of liquid fertilizer, which is labeled as a 0-40-0 fertilizer. The weight / volume (kg/L) concentration of  $\text{H}_3\text{PO}_3$  is thus:

$$(3.86 \text{ lbs} \times 0.454 \text{ kg/lb}) \div (1 \text{ gallon} \times 3.785 \text{ L/gallon}) = 0.46 \text{ (kg/L)}$$

In order to convert available amount of phosphorus in the form of  $\text{H}_3\text{PO}_3$  concentration to the form of  $\text{P}_2\text{O}_5$  concentration, one must begin with the molecular weight of these two molecules. The atomic weight for phosphorus is 30.97 grams per mole, hydrogen 1.01 g/mole, and oxygen 15.99 g/mole. The molecular weight for  $\text{H}_3\text{PO}_3$  is thus 81.97 g/mole and  $\text{P}_2\text{O}_5$  141.89 g/mole. Since there is one atom of phosphorus in every molecule of  $\text{H}_3\text{PO}_3$  and there are two atoms of phosphorus in every molecule of  $\text{P}_2\text{O}_5$ , same amount of phosphorus thus exists in 1 mole of  $\text{H}_3\text{PO}_3$  and  $\frac{1}{2}$  mole of  $\text{P}_2\text{O}_5$ , i.e., in 81.97 grams of  $\text{H}_3\text{PO}_3$  and 71.945 grams of  $\text{P}_2\text{O}_5$ . Therefore, to convert a weight / volume concentration ( $\text{H}_3\text{PO}_3$ ) into a weight / volume concentration ( $\text{P}_2\text{O}_5$ ), the following calculation is necessary:

$$\text{W/V (P}_2\text{O}_5) = \text{W/V (H}_3\text{PO}_3) \times 71.945 \div 81.97$$

When  $\text{W/V (H}_3\text{PO}_3) = 0.46 \text{ kg/L}$ ,  $\text{W/V (P}_2\text{O}_5) = 0.46 \times 71.945 \div 81.97 = 0.40 \text{ (kg/L)}$ , or 40% (kg/L) W/V. This percentage corresponds to the label of "0-40-0 fertilizer."

Using Example 6 as a second example to illustrate the same point, 2.89 lbs of  $\text{H}_3\text{PO}_3$ , 2.99 lbs of KOH, and 0.84 of lb citric acid are included in a one gallon liquid fertilizer labeled as 0-30-30.

$$\begin{aligned} \text{W/V (P}_2\text{O}_5) &= \text{W/V (H}_3\text{PO}_3) \times 71.945 \div 81.97 \\ &= (2.89 \text{ lbs} \times 0.454 \text{ kg/lb}) \div (1 \text{ gallon} \times 3.785 \text{ L/gallon}) \times 71.945 \div 81.97 \\ &= 0.30 \text{ (kg/L) or 30\% (kg/L) W/V} \end{aligned}$$

This percentage again corresponds to the label of "0-30-30 fertilizer."

Further, the concentration of KOH in weight / volume in this example can be just as easily converted into concentration of  $K_2O$  in weight / volume. The atomic weight of K is 39.10, thus molecular weight of KOH is 56.10 g/mole and  $K_2O$  94.19 g/mole. Since there is one atom of potassium in every molecule of KOH and there are two atoms of potassium in every molecule of  $K_2O$ , there is equal amount of potassium in 1 mole of KOH and  $\frac{1}{2}$  mole of  $K_2O$ , i.e., in 56.10 grams of KOH and 47.095 grams of  $K_2O$ . Therefore,

$$\begin{aligned} W/V (K_2O) &= W/V (KOH) \times 47.095 \div 56.10 \\ &= (2.99 \text{ lbs} \times 0.454 \text{ kg/lb}) \div (1 \text{ gallon} \times 3.785 \text{ L/gallon}) \times 47.095 \div 56.10 \\ &= 0.30 \text{ (kg/L) or } 30\% \text{ (kg/L) W/V} . \end{aligned}$$

This percentage also corresponds to the label of "0-30-30 fertilizer."

It is thus clear that a person with ordinary skill in the art is able to recognize, based on the volume of the fertilizers and weight of  $H_3PO_3$  in the fertilizers, that the fertilizer labels in the examples of the specification refer to  $P_2O_5$  concentration in weight / volume percentage and not in weight / weight percentage.

7. The conversion principle described in Paragraph 6 allows simple mathematical conversion of an  $H_3PO_3$  concentration in weight / volume to an equivalent  $P_2O_5$  concentration in weight / volume, which is routine for those skilled in the art. Hence, when a fertilizer of the present invention is described in terms of  $P_2O_5$  weight / volume concentration to reflect the amount of phosphorus contributed by  $H_3PO_3$ , one skilled in the art can routinely prepare the fertilizer by introducing a proper amount of  $H_3PO_3$  into the fertilizer mixture. There is no need for any experimentation.

8. Furthermore, the same conversion principle allows one skilled in the art to calculate the appropriate amount of any given phosphorous-containing species, regardless

PATENT

whether it is a phosphorous-containing acid, a phosphorous-containing salt (i.e., a phosphite), or any other phosphorous-containing species, to be introduced into a fertilizer mixture, when the amount of phosphorus contributed by this phosphorous-containing species is described in terms of  $P_2O_5$  weight / volume concentration.

9. In view of the foregoing, it is my scientific opinion that one of ordinary skill in the art will be able to understand the subject matter of the claimed invention and practice the invention through routine calculations.

**DECLARATION AND POWER OF ATTORNEY  
FOR PATENT APPLICATION**

As a below-named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name,

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled A NOVEL FORMULATION OF PHOSPHORUS FERTILIZER FOR PLANTS, the specification of which

(check ☐ is attached hereto.  
one)

☒ was filed on 7 February 1994 as  
Application Serial No. 08/192,508  
and was amended on \_\_\_\_\_  
(if applicable)

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose to the Patent Office all information known to me to be material to patentability as defined in 37 C.F.R. 1.56.

I hereby claim foreign priority benefits under Title 35, United States Code, §119 of any foreign application(s) for patent or inventor's certificate listed below and have also identified below any foreign application for patent or inventor's certificate having a filing date before that of the application on which priority is claimed:

Prior Foreign Application(s)			Priority Claimed	
_____	_____	_____	<input type="checkbox"/>	<input type="checkbox"/>
(Number)	(Country)	(Day/Month/Year Filed)	Yes	No
_____	_____	_____	<input type="checkbox"/>	<input type="checkbox"/>
(Number)	(Country)	(Day/Month/Year Filed)	Yes	No
_____	_____	_____	<input type="checkbox"/>	<input type="checkbox"/>
(Number)	(Country)	(Day/Month/Year Filed)	Yes	No

I hereby claim the benefit under Title 35, United States Code, §120 of any United States application(s) listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States application in the manner provided by the first paragraph of Title 35, United States Code, §112, I acknowledge the duty to disclose to the Patent Office all information known to me to be material to patentability as defined in 37 C.F.R. 1.56 which occurred between the filing date of the prior application and the national or PCT international filing date of this application:
